My part — slides 4, 5, 6 (about 65 seconds)

Transition from slide 3 (after Sean finishes the dataset)

Thanks, Sean. So with that data, the first thing we asked was: who actually needs this?

Slide 4 · Screening (35 s)

Not every product does. If China is three hundred percent cheaper on headphones, no tariff changes the answer.

So we ran one rule on both datasets. Step one: keep categories where the two cheapest origins are within twenty percent on unit cost. Step two: keep the ones where three or more countries sit that close.

Consumer goods: thirty-six pulled, twenty-three comparable, seven near-tied, four multi-country. Industrial goods: thirteen curated, seven near-tied, five multi-country.

Why closeness? Because the break-even tariff is simply the cost gap. A four percent gap flips on a four-point tariff move. A three-hundred percent gap never does.

（重點只有一句：損益兩平 = 成本差距。數字念慢一點，手指著漏斗）

Slide 5 · Nine categories (15 s)

That leaves nine categories in five industries, from apparel and footwear to auto parts and electronics. In every one of them the two cheapest origins are within twelve percent on cost.

And for the industrial five we know the duty each country actually paid in 2025: China paid thirty to fifty points more than its cheapest rival.

These importers are a few percent away from a different answer. They are our first customers.

（不用唸類別名稱，手掃過卡片即可；強調「12% 內」和「實繳關稅差 30–50 點」兩個數字）

Slide 6 · Demo hand-off (15 s)

So let me make it concrete. Meet Jeannie. She runs a small clothing store and buys ten thousand cotton T-shirts an order from China. The tariff on China just changed. Vietnam and Bangladesh are on her list. Stay, switch, or renegotiate?

Let’s ask SourceSwitch.

（最後一句停一拍，再切到 demo）

If you get a question

- Why 20%? “It is the range a realistic tariff or currency move can cover within a year.”
- Why 3% share cutoff? “Below that an origin usually cannot supply a real order; it is a scale filter.”
- Aren’t unit values just averages? “Yes, they find the market. The decision uses the importer’s own quotes.”
